CAPSTONE 13

Verification & Project Review Report

AI Learning Roadmap Generator for Career Skills | Review of the 10 supplied Google Drive deliverables

1. Executive summary

The supplied link list indicates a structured project package: three AI-generated roadmaps, a roadmap comparison, a final selected roadmap, a resource-verification document, a reusable prompt library, a progress tracker, and an infographic poster.

VERIFICATION LIMITATION: The Google Drive file contents could not be retrieved in this review environment. This report therefore verifies the supplied deliverable list and reviews the planned evidence requirements; it does not certify that every file's contents, URL, formula, or source claim has been checked.

2. Project purpose and scope

The project aims to generate and compare 12-week learning plans for a beginner pursuing Junior Data Analyst skills, verify learning resources, select an improved roadmap, and support the learner with a tracker and infographic.

Deliverables identified from supplied titles

Area	Supplied evidence	Review status
AI generation	ChatGPT, Claude, and Gemini roadmap links	Links listed; content review pending
Comparison and selection	Comparison document and PDF; Final Strong Roadmap	Scoring and rationale pending review
Verification and prompts	Verification of Resources; Reusable Prompt Library	Source-level checking pending
Implementation aids	Progress Tracker; Infographic Poster	Usability and accuracy pending

3. Verification method

Listed: a named deliverable link was supplied. **Partially assessed:** its intended role can be inferred from the title, but the contents were unavailable. **Pending verification:** a claim requires reading the file, opening a URL, checking an official source, or testing the workflow.

A file title alone cannot prove that a roadmap is accurate, a resource is accessible, a tracker formula works, an infographic is readable, or an automation has run successfully.

4. Deliverable-by-deliverable status

Deliverable	Evidence from link list	Checks still required
1. ChatGPT Roadmap	Roadmap link supplied.	Check weekly skills, hours, links, exercises, and success criteria.
2. Claude Roadmap	Second AI roadmap link supplied.	Read and compare content against the other roadmaps.
3. Gemini Roadmap	Third AI roadmap link supplied.	Read and compare content against the other roadmaps.
4. Final Strong Roadmap	Final roadmap link supplied.	Confirm it combines strong features and fixes identified gaps.
5. Comparison document	Editable comparison link supplied.	Check criteria, scores, evidence, and decision rationale.
5. Comparison PDF	PDF version also supplied.	Check that it matches the editable version and is complete.
6. Progress Tracker	Spreadsheet link supplied.	Test columns, formulas, dropdowns, dates, and completion calculations.
7. Infographic Poster	Poster link supplied.	Check readability, accuracy, week order, and spelling.
Reusable Prompt Library	Prompt library link supplied.	Check prompts are reusable and aligned with the project tasks.
Verification of Resources	Resource-verification link supplied.	Check official URLs, relevance, access, pricing, and evidence.

5. Roadmap quality acceptance tests

Check	What must be true
Coverage	Includes spreadsheets, SQL, Python, Pandas, data cleaning, basic statistics, visualization, and a final portfolio project.
Workload	12 weeks at 5–7 hours/week equals 60–84 planned hours; tasks are realistic and have measurable outputs.
Resource quality	Each link opens the intended material; its topic, beginner suitability, and free/paid status are accurately described.
Practice	Each week creates evidence: exercises, SQL queries, cleaned data, charts, or project notes.
Portfolio	Final project documents its dataset, cleaning, analysis, visuals, conclusions, and reproducible output.

6. Capstone completion requirements

The following requirements should be marked complete only after evidence is saved. The supplied links alone do not prove these activities have been performed.

Requirement	Evidence to retain	Status in this review
Final demonstration	Walkthrough of three roadmaps, comparison, final roadmap, tracker, infographic, resource checks, and limitations.	Pending: demo not reviewed
Four free-tier tools	Names, purpose, actual outputs/screenshots, and a current access/plan check for each tool.	Pending: usage evidence unavailable
Six AI skills from Topics 1–9	Map six demonstrated skills to exact syllabus topics; include prompts and resulting artefacts.	Pending: syllabus mapping needed
One automation workflow	Configured workflow plus successful test, notification, or execution record. A diagram alone is not enough.	Pending: run evidence unavailable

7. Priority action plan

1. Confirm that each shared file opens for the intended reviewer. Google Drive sharing may be set to “Anyone with the link — Viewer,” subject to account or organisation restrictions.

2. Compare the three original roadmaps and record what was kept, changed, or rejected in the final roadmap.

3. Test every learning-resource URL. Record the official source, topic, access/cost status, date checked, and result.

4. Test tracker formulas and dropdowns using sample entries; correct any calculation errors.

5. Proofread the infographic at presentation size, including week numbers, topic sequence, and spelling.

6. Save evidence for four tools, six syllabus-aligned AI skills, and one successfully tested automation.

7. Record a short demonstration and clearly disclose any parts not yet tested.

8. Conclusion

The supplied link list indicates that the principal documentation deliverables have been assembled. However, the underlying files were not readable through the available review connection, so their content and factual accuracy cannot yet be certified. Current status: **deliverables listed; content-level verification pending**. Uploading the files directly to this chat will allow a true content review and a revised report grounded in the actual artefacts.

Source note: This report is based on the ten links and their titles supplied by the user. Google Drive's official sharing instructions explain how to configure link access and viewer permissions: https://support.google.com/drive/answer/2494822. This is a sharing reference, not evidence that the supplied files were opened.
